

### ABSTRACT

A method, system, and apparatus for configuring an electronic device for communications with a communications network is disclosed. The disclosure includes descriptions of establishing a wireless communications link between a first electronic device and a second electronic device. The first electronic device has saved thereon a set of network parameters for enabling communications between the first electronic device and the communications network. The disclosure also includes descriptions of communicating the set of network parameters to the second electronic device, retaining the set of network parameters on the second electronic device, and establishing a communications link between the second electronic device and the communications network by applying settings to the second electronic device, where the settings are based on the network parameters.
